Zeinab Amr Mahmoud

.NET Developer | ASP.NET Core & MVC

Cairo, Egypt | zienabamr2372005@gmail.com | LinkedIn: Zeinab-Amr | GitHub: zienab-amr | +201277504791

OBJECTIVE

Computer Science senior (4th year) specializing in .NET and ASP.NET Core development, with hands-on experience building secure REST APIs, RBAC systems, and cross-platform integrations across 5+ production-style projects. Seeking a Junior .NET Developer position to apply strong .NET, SQL Server, and system architecture skills in a real-world team environment.

EDUCATION

Faculty of Science, Ain Shams University
Bachelor of Computer Science | GPA: 3.1 | Expected Graduation: 2027 (4th Year)

SKILLS

Programming Languages: C#, C++, JavaScript, TypeScript, Dart, Java

Backend: ASP.NET Core, ASP.NET MVC, Entity Framework Core, LINQ, REST APIs, Node.js, Express.js

Mobile: Flutter, BLoC/Cubit, Dio, Localization, Responsive UI

Databases: SQL Server, MongoDB, MySQL

Frontend: HTML, CSS, Bootstrap, Angular (In Progress)

Architecture, Security & Concepts: Layered Architecture, Microservices, Repository Pattern, JWT Authentication, RBAC, Middleware Authorization, Refresh Tokens, OTP Authentication, Agile

Tools: Git, GitHub, Postman, Swagger, Jira, Visual Studio, VS Code

COURSES & INITIATIVES

- Information Technology Institute (ITI) — CS50: Introduction to Computer Science *(July 2024)*
- Digital Egypt Pioneers Initiative (DEPI) — Full Stack .NET Track *(June – Dec 2025)*
- Information Technology Institute (ITI) — Flutter Cross-Platform *(July – Aug 2026)* and National Telecommunication Institute (NTI) — MEAN Stack Development *(July – Aug 2026, concurrent)* **— NTI Final Score: 97.5%**
- iCareer — Digitera Program, Technical Track (Agile & Jira) *(Jun – Jul 2026)*
- Information Technology Institute (ITI) — .NET Development Certificate *(Aug – Sep 2026)*

PROJECTS

ShadowPay – Smart Payment & Fraud Detection System *March 2026 – May 2026*

Flutter • ASP.NET Core Web API • Java Microservices • SQL Server • JWT • ML Integration

- Engineered the ASP.NET Core backend and authentication flow, implementing JWT, refresh tokens, and a Memory Cache-based OTP system.
- Orchestrated cross-service integration across .NET, Java microservices, and a FastAPI ML model for real-time fraud validation, with a Flutter frontend using BLoC/Cubit and secure local storage.

ERP System – OPTIMA *Aug 2025 – Dec 2025*

ASP.NET MVC • SQL Server • HTML • CSS • Bootstrap • JavaScript • AJAX

- Architected a fully dynamic, database-driven RBAC system with custom middleware, enforcing strict action-level authorization without hardcoded permissions — awarded "Best Software Engineering Project" at CLS Company (DEPI).
- Built a responsive, mobile-first frontend with Bootstrap and AJAX, including adaptive data cards and a UI-driven permission management engine.

Full Stack Banking System *Apr 2026 – May 2026*

Flutter • Java JAX-RS • JPA/Hibernate • SQL

- Architected a layered Java RESTful backend (Resource, Service, Repository) using JAX-RS and JPA/Hibernate, with optimized relational models via JPQL and pagination.
- Built secure banking modules for account and transaction management, enforcing strict financial validation including CVV hashing and dynamic card masking, integrated with a Flutter mobile frontend.

SyncSkill – Skill Exchange Platform *July 2026 – Aug 2026*

Flutter • Firebase • Cloud Firestore • BLoC/Cubit

- Built a peer-to-peer skill exchange platform with a full request lifecycle (send, accept, reject, cancel, track), powered by a Firebase/Firestore backend with user-specific data access.
- Implemented real-time UI synchronization using BLoC/Cubit for dynamic request and notification flows.

AssetLink – Enterprise Equipment & Asset Rental Platform *July 2026 – Aug 2026*

Angular • Node.js • Express.js • MongoDB

- Led a team to 1st place in the NTI training program, overseeing system architecture, task delegation, and Git workflow.
- Engineered a full-stack B2B platform for secure equipment rentals with digital contracts, escrow, and real-time negotiation, using Node.js/Express APIs, MongoDB, and an Angular frontend.
